

SUMMER PROJECT
WEB-DEVELOPMENT

Project Idea:

Internet presence of any organization is very important nowadays. A good website provides credibility and builds trust. It provides information about the organization to visitors of the website. As IETE conducts many events and hacks sponsorship is required. A good website can help to build trust among the sponsors and attract sponsors. Though the website of IETE-VIT exists already, It is important to update the website. The website would be made responsive so that it can be viewed on any device without any hassle. Responsive design also increases the ranking of the website and can attract more visitors. This project will provide me a great opportunity to develop a website for IETE-VIT.

Tech stack:

- HTML
- CSS
- JavaScript

Time required:

25-30 days

PS: I have to learn JavaScript hence will need at least 25 days' time.
